0. PREMISE

This document contains a proposal for the updating and extension of eBIZ specifications starting from the eBIZ version released as CEN CWA 16667 in 2013. Under the name of 'Draft version' it is reported the result of an extensive work of analysis and consultation aimed at developing and maintaining eBIZ specifications.

In particular, the content of this proposal is the result of various activities, mainly those carried out within the framework of the **eBIZ 4.0 project** funded by the European Commission, call COS-DESIGN-2015-3-06, topic COS-2015-DESIGN-2.

The technical contents are backwards compatible with the latest official published version.

1. BUSINESS DESCRIPTION

1.1 Scope

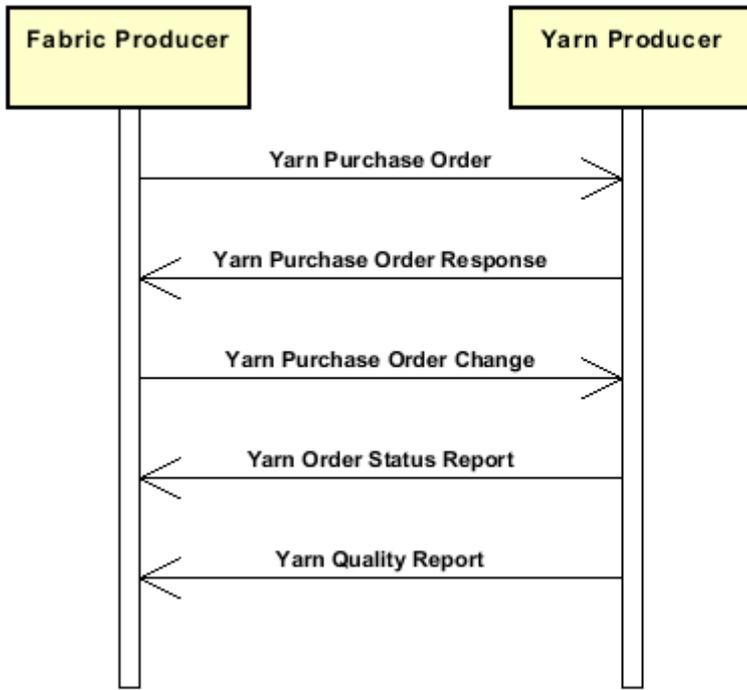

Rarely, and usually when problems arise at the weaving mill, the Client can ask to receive an external Laboratory test report to assess the values given by the Manufacturer or to evaluate further parameters. In such case the Laboratory, after the manufacturing, sends a quality report that certify the manufacturing characteristics and the mechanical-physical-chemical properties of the batch to be delivered, giving the actual values of the construction and quality parameters agreed upon

1.2 Generalities

Rarely, and usually when problems arise at the weaving mill, the Client can request to an external Laboratory either the check of the values given by the Manufacturer or the evaluation of further parameters. In such case the Laboratory sends a quality report that certify the manufacturing characteristics and the mechanical-physical-chemical properties through the actual values of the concerned parameters.

2. IMPLEMENTATION GUIDE

2.1 General structure of XML document

All the business data that can be exchanged through this class of documents are shown in the following "document structure", that provides a simplified vision of the Schema.

In particular:

- the two numbers following each element define its "cardinality" (minimum and maximum number of occurrences); the minimum equal zero indicates that the element is optional, the minimum greater than zero indicates that is mandatory;
- the bold character denotes the complex elements (aggregates of simple elements) that were built for the sake of functionality and re-usability of some complex informations sets. The child elements in each parent element are easily spotted as "indented";
- the symbol "@" denotes an attribute of the preceding element; here "the usage indicator (optional, required, ...)" is shown in square brackets.
